

FLOWBOND

DESCRIPTION

FLOWBOND has the property of aiding the self levelling function of self-levelling screeds while incorporating bonding agents. **FLOWBOND** overcomes the lack of self-levelling in self level screeds when a bonding agent is added.

FEATURES

- The self-levelling function of the screed is not affected but enhanced.
- The association of the bonding agent with the flow agent in **FLOWBOND** does not affect self-levelling screeds.
- Bond of the self levelling screed mixed with **FLOWBOND** is superior than when the self levelling screed is mixed with water.
- **FLOWBOND** self-levelling screeds are effective on damp concrete surfaces.
- **FLOWBOND** is a total water replacement to mix self levelling screeds.
- **FLOWBOND** imparts damp resistance to the set self levelling screed.

DIRECTIONS

Use **FLOWBOND** as a total water replacement to mix self levelling products at the rate of 4.5-4.8 litres of **FLOWBOND** for 20kg of self-levelling screeds.

The mixing and substrate preparation procedures is the same as that described on the self-levelling packages.

Trowel out the wet mix as usual to the desired thickness within the limits specified on the self levelling product packaging. For extra bond, apply a coat of **FLOWBOND** to the concrete substrate at the rate of 4m²/litre. While the coating is wet, apply the self-levelling wet mix on to the wet coat of **FLOWBOND**.

CAUTION

DO NOT ADD ANY OTHER MATERIALS OR WATER TO THE WET MIX OF **FLOWBOND** SELF LEVELLING PRODUCT.

STORAGE

Store **FLOWBOND** in a covered cool area. Replace the lid on the container after each use.

CLEAN UP

Clean tools with water immediately after use. For harder deposits clean with **MARCMOVE**.

PACK SIZES

FLOWBOND is sold in pack sizes of 10 and 20 litres.

TRANSPORT

FLOWBOND is not a hazardous good as defined by Safe Work Australia.
